

Sorell

Plant Species List

This plant species list is a sample of species that occur in your municipality and are relatively easy to grow or to purchase from a native plant nursery.

Some of the more common plants are listed, as well as uncommon species that have a limited distribution and only occur in your area.

However, many more species could be included on the list. Observing your local bush is a good way to get an idea of what else may be grown in your area and is suited to your property. To help choose your plants, each species is scored against soil type, vegetation community and uses.

An extensive listing of suitable species can be found on the NRM South and Understorey Network websites.

Dodonaea viscosa (broadleaf hopbush)

Sorell Plant Species List

Standard Name Common Name

Endemic

Coastal Vegetation
Rainforest
Wet Eucalypt Forest
Dry Eucalypt Forest and Woodland
Grassy Vegetation
Heath
Sedgeland and Wetland
Riparian
Montane Vegetation

Well drained soil
Poorly drained soil
Sandy soil
Loamy soil
Clay soil

Soil Type

Clay soil Poor soil Fertile soil

Low flammability
Erosion control
Shelter belts
Bush tucker

Uses

Easy to propagate from seed Easy to propagate from cuttings Easy to propagate by division

Salinity control

Water Wise

Grow from

nity
iity

Trees																										
Acacia mearnsii	black wattle				•	•					•	•		•		•	•			•	•	•		•

Tetragonia implexicoma	bower spinach		•											•					•	•		•		•		•	

Note: However well intended, planting threatened species is potentially problematic. Due to risks of genetic contamination, limited availability of provenance plants and to discourage collection from native occurrences without a permit, threatened species were deliberately not included in these plant lists.

The Understorey Network 03 6234 4286 www.understorey-network.org.au

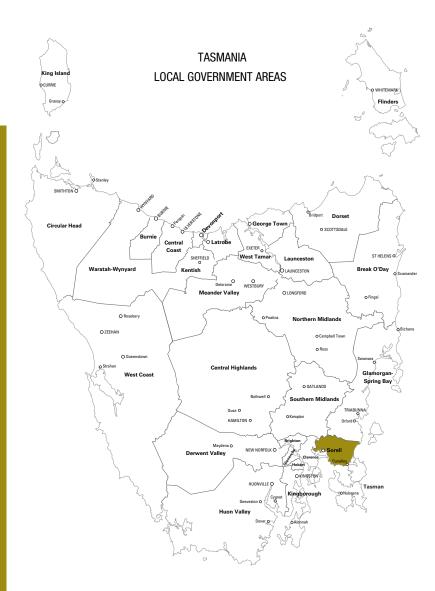

Native plants occurring naturally in an area are adapted to survive and thrive in more likely to have a successful planting site by choosing local species. By planting locally sourced species, you are helping to preserve any natural variability within that species. Planting local species also assists with providing habitat for birds,

Plants can be obtained from a native plant own seed and to grow them yourself. The advice on how to propagate native seeds. It's cheap (no hothouses or shadehouses
